Delegates of the International Bioethics Committee,

Established under the United Nations Educational, Scientific and Cultural Organization in 1993, the International Bioethics Committee brings together 36 independent experts, appointed for four-year terms, to examine complex biomedical global issues. The committee addresses advancements in gene editing and digital technology while creating policy frameworks for global health. Through this work, experts assess how rapid technological innovation impacts human rights and ensure that scientific progress serves humanity worldwide.

This year's theme, "Moderating Morality," allows delegates to look beyond basic legality but to tackle real ethical responsibility. Just because an action is legal does not automatically make it morally acceptable. In our advanced world science continuously expands what humanity can accomplish making it vital for us to evaluate the moral weight behind every innovation. This theme directly connects to our agenda as it drives us to examine real-world consequences.

As AMMUN is a THIMUN-affiliated conference, delegates must maintain a respectful environment and demonstrate deliberate diplomatic thinking. We gather to confront real-life situations and provide realistic concepts and actionable solutions. We expect delegates to participate in active debate and think critically to address major international issues. Through procedural integrity and open dialogue our committee will create a fruitful and productive environment.

Please do not hesitate to contact any member of the IBC chairing panel if you have questions or need further information. The chairing panel will always be ready to help whether it's before, during or after the conference.

Zein Hazineh,

President of the International Bioethics Committee.
